

# Use of remote sensing and terrain modeling to identify suitable zones for manual drilling in Africa and support low cost water supply

## PARTNERS

UPGro Knowledge Broker:

**skat** Swiss Resource Centre and Consultancies for Development

University Milano Bicocca (Italy)

SNAPE (Guinea)

University Cheik Anta Diop (Senegal)

UNICEF (Guinea and Senegal)

2015 UN-Water Annual  
International Zaragoza  
Conference

15–17 January 2015

# Water and Sustainable Development

## From vision to action

## MANUAL DRILLING

techniques of drilling boreholes for groundwater exploitation using human or animal power (not mechanized equipment).

These techniques are well known in countries with large alluvial deposits (India, Nepal, Bangladesh, etc)

High quality hand drilled wells can provide sustainable and clean water supply

## Advantages of manual drilling

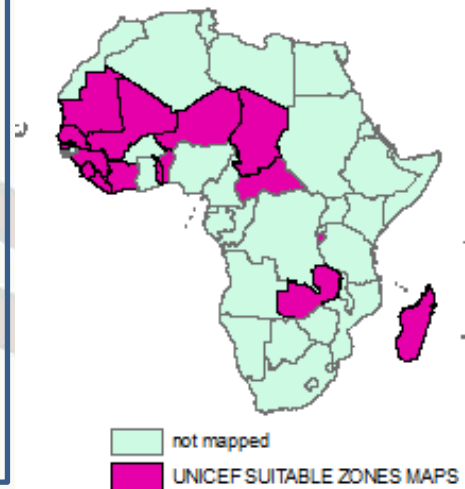

- Cheaper than mechanized boreholes
- Easy to implement with locally made equipment
- “manual work intensive” and not “capital intensive” ; source of income for local groups

## Limitations of manual drilling

- Manual drilling is feasible only under hydrogeological suitable conditions
- Soft unconsolidated shallow geological layers
  - Water level not too deep
  - Good hydraulic conductivity of shallow porous aquifers

**IT IS IMPORTANT TO IDENTIFY THOSE ZONES WHERE HYDROGEOLOGICAL CONDITIONS ARE SUITABLE FOR MANUAL DRILLING.**

**MAPS OF SUITABLE ZONES HAVE BEEN COMPLETED IN 15 COUNTRIES SINCE 2008**

## **OBJECTIVE OF THE RESEARCH**

Integration of direct hydrogeological information from existing database with indirect parameters from Remote Sensing and terrain modeling to characterize shallow aquifers and identify suitable zones for manual drilling

## **DURATION**

November 2013 – April 2015

## **STUDY AREA**

**REGION OF LOUGA – KEBEMER (NORTH  
WEST SENEGAL)**

**REGION OF KANKAN AND FARANAH  
(EAST GUINEA)**

## Role of partners and external stakeholders

ACTIVITY	ACADEMIA	NATIONAL INSTITUTIONS	INTERNATIONAL ORGANISATIONS
SCIENTIFIC RESEARCH AND CAPACITY BUILDING	-UNIVERSITY MILANO BICOCCA (IT) -UNIVERSITY CHEIK ANTA DIOP (SEN) <b>-University of Thies (SEN)</b>		
DISSEMINATION	As above		-UNICEF
INTEGRATION RESEARCH INTO NATIONAL STRATEGY FOR WATER SUPPLY		-SNAPE (Guinea) <b>- DGPRE (Sen)</b>	
COORDINATION WITH MANUAL DRILLING PROGRAM	-UNIVERSITY MILANO BICOCCA (IT)	-SNAPE (Guinea)	- UNICEF <b>- Practica</b>
FUNDING	NERC (UK) - scientific research UNICEF (with external donors) for manual drilling in Guinea		

## Scientific approach

Thematic maps, Remote Sensing (optical, radar),  
Digital terrain model

Geo-Environmental indicators (Geology, Soil, Morphometry,  
Vegetation dynamics, Soil moisture, Thermal Inertia)

(Geo)Statistical model

Map of suitable zones  
for manual drilling

Hydrogeological features at observation points

Borehole logs interpretation, pump test, geophysics

## Source of data

**THE RESEARCH IS BASED ON AVAILABLE AND FREE OF COST DATA AND WITH LIMITED COST FOR FIELD DATA COLLECTION.**

**THIS FACILITATE THE EXTENSION OF THIS METHOD TO OTHER REGIONS,**

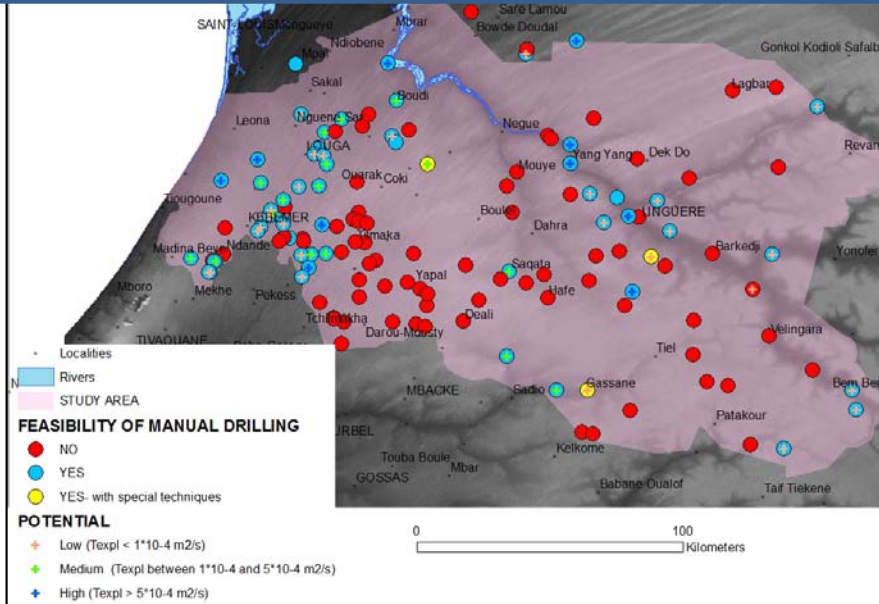

**NATIONAL DATABASE OF  
WATER POINT**

**THEMATIC MAPS**

**Free satellite images  
(MODIS)**

**Radar images (obtained  
from European Space  
Agency free of cost)**

## Preliminary results achieved

Extraction of environmental  
parameters from remote  
sensing

VEGETATION DYNAMICS - DRY SEASON MEAN NDVI

Estimating feasibility and  
potential for manual drilling at  
borehole positions

## Expected final outputs

- **Definition and validation of structured method to infer shallow hydrogeology and suitability for manual drilling from indirect data**
- **Generation of maps of suitability for manual drilling in 2 study area**

## Factor of success

- **Collaboration between partners**
- **Coordination between scientific research, training of drilling teams, implementation of hand drilled wells in target zones, advocacy**
- **Deep Involvement by national institution (SNAPE)**
- **Active role of UNICEF in support and fund raising**
